	Examiner Jill L. Heitbrink	Art Unit 1732	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 and 8-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Sorensen (Pat. No. 4,960,557).

3. Sorensen discloses the providing of a mold cavity and a first and second resin stream within the cavity having a flow front wherein the flow fronts interact to form an interlocking knit line geometry (meld) in the thicker cavity portion, meld chamber 30. The meld chamber 30 is clearly a modified mold cavity including a direction dam and the meld chamber would inherently cause the colliding and melding resin streams to be imparted with either a rotational or transverse flow.

4. Claims 1-5 and 8-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Ellwood et al. (Pat. No. 5,833,913).

5. Ellwood discloses the flow fronts fragmenting and then intermixing and homogeneously dispersed in the interfacial area to cause a homogeneous knit line geometry and retractable protrusions (Fig. 4) or dam being incorporated into the mold. This intermixing inherently is part of the colliding resin streams having rotational and transverse flow caused by the disrupters.

Allowable Subject Matter

6. Claims 6, 7, 13 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art does not teach a molded paddle that rotates during the molding process to facilitate interaction of the flow fronts of the resin stream.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jill L. Heitbrink whose telephone number is 571-272-1199. The examiner can normally be reached on Monday - Friday 9:30-2:00.
